Going on a Secured Journey in the Cyberspace!

Three evil cyber monsters have appeared in the cyberspace, which love to swallow innocent network users...... **START**

RefineNetworks

Level 1: Phishing

This monster impersonates a trustworthy entity in fake emails distributed massively and randomly, tricking victims into downloading malware or ransomware with malicious links or attachments and making fraudulent attempts to obtain passwords!
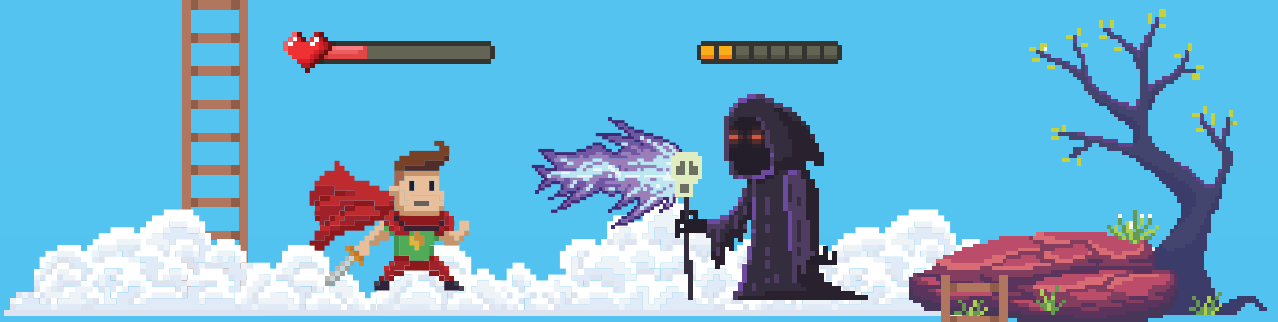

Level 2: Spear Phishing

This monster pretends to be a high reputation sender and fools you with personalized messages. The messages may contain zero-day, never used before links that do not appear obviously malicious to security protection tools!
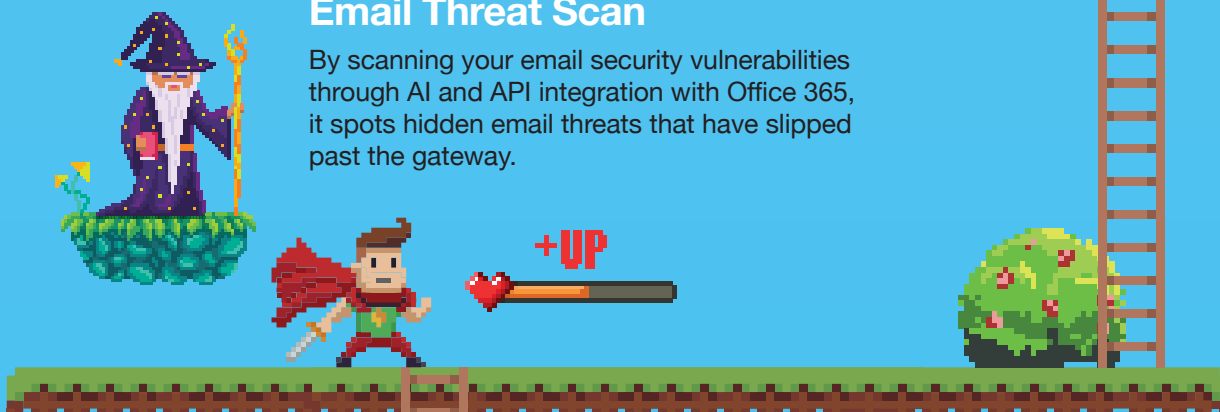

Level 3 : Business Email Compromise

This monster compromises a senior executive's account to send fake messages without link or attachment to reduce suspicion, tricking employees, customers and partners to disclose sensitive data or perform wire transfers. It creates legal troubles by sending fraudulent emails in your name!

Email Threat Scan

By scanning your email security vulnerabilities through AI and API integration with Office 365, it spots hidden email threats that have slipped past the gateway.

+UP

Anti-phishing and Account Takeover Protection

Besides blocking invaders like what an email filter does, it stays ahead of attackers by using AI to detect personalized fraud inside the mailbox that security gateways cannot detect and works transparently with zero administration!

+UP

Thanks to these super effective security tactics, we will fear no more of the three cyber monsters. Let's enjoy a secured journey in the cyberspace! ♥

Forensics and Incident Response

It detects anomalies based on historical insights, reducing risks by accelerating detection and remediation, while preventing future breaches with intelligence gathered from previous threat responses.
